## ABOUT ME

I'm a programming languages research scientist transitioning into ML and alignment. I have a working knowledge of around two dozen programming languages, and expertise in a handful (Coq ( $\approx 1\text{M}+$  loc), Python ( $\approx 80\text{k}$  loc), Agda ( $\approx 50\text{k}$  loc), others). I spent my PhD on low-level cryptographic code generation, proof automation, performance engineering, and infrastructure around debugging and CI. My current project is in mechanistic interpretability, heuristic arguments, and compact proofs. I'm excited about what scalable performant automation can make possible.

## EXPERIENCE

### Special Project of ARC Theory

August 2023–Present

*Project Lead*

Berkeley, CA

- Building the first machine-checked functional-correctness proofs of mechanistic interpretability arguments about transformers in Coq ([github.com/JasonGross/neural-net-coq-interp](https://github.com/JasonGross/neural-net-coq-interp))
- Raised \$150k & leading an interdisciplinary team of eight ML researchers and mathematicians

### Machine Intelligence Research Institute (MIRI)

February 2021–September 2023

*Research Staff*

Berkeley, CA (remote)

- Performing self-directed research into fundamental programming language theory and math

### Coq Development Team, INRIA

June 2021–Present

*Member of Core Team*

Nantes, France (remote)

- Reported the plurality of all-time bugs in Coq (since 2012)
- Designed and engineered a bug report minimizer for automatically producing minimized standalone test-cases and minimizing regressions in external projects tested by Coq's CI
- Researching performance issues that impact scalability of automated verification

### MIT CSAIL

September 2013–February 2021

*PhD Researcher*

Cambridge, MA

- Main Project: Fiat Cryptography ([github.com/mit-plv/fiat-crypto](https://github.com/mit-plv/fiat-crypto))
- Fiat Cryptography is a developer tool to generate proven-correct cryptographic code, with wide industry adoption, powering the plurality of secure connections in Chrome and Firefox
- Lead development of one of the world's first algorithm-level-optimizing compilers
- Collaboratively implemented the tool; wrote backends to C, Go, Java, and JSON; managed development of backends to Rust and Zig

## EDUCATION

### Massachusetts Institute of Technology

2013–2021

PhD in Computer Science

Cambridge, MA

Advisor: Adam Chlipala

*Thesis: Performance Engineering of Proof-Based Software Systems at Scale*

*SM Thesis: An Extensible Framework for Synthesizing Efficient, Verified Parsers*

### Massachusetts Institute of Technology

2009–2013

BS in Mathematics and Physics

Cambridge, MA

GPA: 4.6/5

## INTERNSHIPS

- MIRI, summer 2019: Formalized type theories, and proved properties of programs that reason about themselves
- Google, summer 2018: Worked on integration of Fiat Cryptography with BoringSSL in Chrome
- Google, summer 2016: Extended Fiat Cryptography with ECC primitives for integration with Open Titan
- Microsoft Research, summer 2014: Collaboratively created a language for specifying input/output behavior of x86 assembly programs, verified the input/output behavior of a number of simple programs, and improved performance of the x86proved project
- MIT CSAIL — PLV, 2012–2014: Entered a significant amount of category theory into the automated proof assistant Coq, and worked on building an interface for databases and database migration on top of category theory
- MIT CSAIL — CoCoSci, 2009–2011: Designed and managed the data collection webpage for research in categorical learning and transfer learning
- Commack High School, 2006–2009: Researched circuits over sets of natural numbers, winning 4th (2009) and 3rd (2008) place awards in mathematics at ISEF

## PROFESSIONAL ACTIVITIES

- Co-maintainer of the Fiat Cryptography project
- Co-maintainer of the homotopy type theory Coq repository (HoTT/HoTT on GitHub)
- Program Committee Member of ITP 2023 and CoqPL 2022
- Supervising research in formalizing correspondence of affine logic to two-player games
- Supervising research in anti-inductive utility functions
- Supervising research in performative power of prediction markets
- Circling Facilitator at The Relatable Company
- Member of SIPB (Student Information and Processing Board)

## SELECT PAST ACTIVITIES

- Participant in MIRI Decision Theory Workshops
- Volunteer at CFAR workshops
- Instructor at MIT ESP Programs
- Instructor at Monsoon Math Camp
- President of MIT Tech Squares
- Contributor to the SIPB BarnOwn project
- Project leader for MITeX, an online interface for composing L<sup>A</sup>T<sub>E</sub>X
- TA for 6.172: Performance Engineering
- TA for 8.012: Physics I and 8.022: Physics II at the Experimental Study Group
- Participant at Canada/USA Mathcamp

## PROGRAMMING LANGUAGES

- Proficient: Coq, Agda, Python, Mathematica, BASIC, T<sub>E</sub>X macro language, git, JavaScript
- Working knowledge: C, C++, OCaml, Haskell, Scheme, HTML, CSS, Perl, Bash, Java
- Basic knowledge: MATLAB, Lean, Idris, Ruby, Go, Ur/Web, x86 Assembly, SQL, Batch
