## ABOUT ME

I'm a programming languages research scientist transitioning into ML and alignment. I have a working knowledge of around two dozen programming languages, and expertise in a handful (Coq ( $\approx 1\text{M}+$  loc), Python ( $\approx 80\text{k}$  loc), Agda ( $\approx 50\text{k}$  loc), others). I spent my PhD on low-level cryptographic code generation, proof automation, performance engineering, and infrastructure around debugging and CI. Now I'm developing a compression-based theoretical foundation for rigorous mech interp. I'm excited about what scalable performant automation can make possible.

## EXPERIENCE

### Special Project of ARC Theory

August 2023–Present

*Project Lead*

Berkeley, CA

- Building the first machine-checked functional-correctness proofs of mechanistic interpretability arguments about transformers in Coq ([github.com/JasonGross/neural-net-coq-interp](https://github.com/JasonGross/neural-net-coq-interp))
- Raised \$150k & leading an interdisciplinary team of eight ML researchers and mathematicians

### Machine Intelligence Research Institute (MIRI)

February 2021–September 2023

*Research Staff*

Berkeley, CA (remote)

- Performing self-directed research into fundamental programming language theory and math

### Coq Development Team, INRIA

June 2021–Present

*Member of Core Team*

Nantes, France (remote)

- Reported the plurality of all-time bugs in Coq (since 2012)
- Designed and engineered a bug report minimizer for automatically producing minimized standalone test-cases and minimizing regressions in external projects tested by Coq's CI
- Researching performance issues that impact scalability of automated verification

### MIT CSAIL

September 2013–February 2021

*PhD Researcher*

Cambridge, MA

- Main Project: Fiat Cryptography ([github.com/mit-plv/fiat-crypto](https://github.com/mit-plv/fiat-crypto))
- Fiat Cryptography is a developer tool to generate proven-correct cryptographic code, with wide industry adoption, powering the plurality of secure connections in Chrome and Firefox
- Lead development of one of the world's first algorithm-level-optimizing compilers
- Collaboratively implemented the tool; wrote backends to C, Go, Java, and JSON; managed development of backends to Rust and Zig

## EDUCATION

### Massachusetts Institute of Technology

2013–2021

PhD in Computer Science

Cambridge, MA

Advisor: Adam Chlipala

*Thesis: Performance Engineering of Proof-Based Software Systems at Scale*

*SM Thesis: An Extensible Framework for Synthesizing Efficient, Verified Parsers*

### Massachusetts Institute of Technology

2009–2013

BS in Mathematics and Physics

Cambridge, MA

GPA: 4.6/5

## INTERNSHIPS

- MIRI, summer 2019: Formalized type theories, and proved properties of programs that reason about themselves
- Google, summer 2018: Worked on integration of Fiat Cryptography with BoringSSL in Chrome
- Google, summer 2016: Extended Fiat Cryptography with ECC primitives for integration with Open Titan
- Microsoft Research, summer 2014: Collaboratively created a language for specifying input/output behavior of x86 assembly programs, verified the input/output behavior of a number of simple programs, and improved performance of the x86proved project
- MIT CSAIL — PLV, 2012–2014: Entered a significant amount of category theory into the automated proof assistant Coq, and worked on building an interface for databases and database migration on top of category theory
- MIT CSAIL — CoCoSci, 2009–2011: Designed and managed the data collection webpage for research in categorical learning and transfer learning
- Commack High School, 2006–2009: Researched circuits over sets of natural numbers, winning 4th (2009) and 3rd (2008) place awards in mathematics at ISEF

## PROFESSIONAL ACTIVITIES

- Co-maintainer of the Fiat Cryptography project
- Co-maintainer of the homotopy type theory Coq repository (HoTT/HoTT on GitHub)
- Program Committee Member of ITP 2023 and CoqPL 2022
- Supervising research in formalizing correspondence of affine logic to two-player games
- Supervising research in anti-inductive utility functions
- Supervising research in performative power of prediction markets
- Circling Facilitator at The Relatable Company
- Member of SIPB (Student Information and Processing Board)

## SELECT PAST ACTIVITIES

- Participant in MIRI Decision Theory Workshops
- Volunteer at CFAR workshops
- Instructor at MIT ESP Programs
- Instructor at Monsoon Math Camp
- President of MIT Tech Squares
- Contributor to the SIPB BarnOwn project
- Project leader for MITeX, an online interface for composing L<sup>A</sup>T<sub>E</sub>X
- TA for 6.172: Performance Engineering
- TA for 8.012: Physics I and 8.022: Physics II at the Experimental Study Group
- Participant at Canada/USA Mathcamp

## PROGRAMMING LANGUAGES

- Proficient: Coq, Agda, Python, Mathematica, BASIC, T<sub>E</sub>X macro language, git, JavaScript
- Working knowledge: C, C++, OCaml, Haskell, Scheme, HTML, CSS, Perl, Bash, Java
- Basic knowledge: MATLAB, Lean, Idris, Ruby, Go, Ur/Web, x86 Assembly, SQL, Batch
